

Dengue Prevention and Control

WHO-based knowledge-base brief for SehatAI Pakistan

Purpose

This WHO guideline provides a public-health framework for dengue prevention and control, including vector management and outbreak response.

Key themes

- Dengue is transmitted by Aedes mosquitoes and prevention depends heavily on reducing mosquito exposure and breeding opportunities.
- Vector control and environmental management are important parts of dengue prevention.
- Community participation and coordinated public-health action are important during dengue-risk periods.
- People with concerning illness should be directed toward qualified health professionals rather than receiving a diagnosis from an AI assistant.

Use in SehatAI

Use this document for dengue prevention, environmental-control and public-health preparedness content. Keep medical assessment limited to general warning signs and referral guidance.
