

Emergency Warning Signs and Health-Emergency Response

WHO-based knowledge-base brief for SehatAI Pakistan

Purpose

This knowledge brief supports safe escalation language for SehatAI. It is not a clinical triage manual and does not replace emergency services or professional assessment.

Key themes

- Health emergencies require timely detection, communication and coordinated response.
- When a person appears seriously unwell or symptoms are rapidly worsening, the AI should prioritize urgent professional medical help rather than attempting a diagnosis.
- The system should avoid false reassurance when information is incomplete.
- Emergency information should be clearly separated from general educational content.

Use in SehatAI

Use this document to support a conservative escalation policy: serious or rapidly worsening situations should be referred to local emergency medical services, hospitals or qualified health professionals.

Primary source: WHO, National health emergency alert and response framework (2025), supported by WHO emergency guidance
