

Heatwave Health Guidance

WHO-based knowledge-base brief for SehatAI Pakistan

Purpose

WHO guidance describes extreme heat as an important public-health risk and provides a framework for prevention, preparedness, communication and response.

Key themes

- Heat-health planning includes warning systems, identification of people at increased risk, communication and reducing heat exposure.
- Keeping people cool and reducing exposure during very hot periods are core prevention measures.
- Heat can contribute to heat exhaustion and heat stroke and can worsen some existing health conditions.
- Severe symptoms or suspected heat stroke require urgent professional medical attention.

Use in SehatAI

Use this document for heatwave preparedness, risk communication, prevention messages and escalation guidance. Do not use it to diagnose a user.
